

Model: Cadet

By designer Troels Bøgely

This timeless design makes the Cadet a classic. Frequently specified for commercial office buildings, schools and shopping centres the Cadet is one of those eye-catching, stylish products that will lift the appearance of any bathroom while also delivering significant water savings.

Danish Design:

The designer wanted to create a smaller compact urinal with a simple design, curved surfaces and user friendly shape; delivering a simple and hygienic solution for residential and commercial bathrooms.

The Cadet is also frequently specified where a children's urinal is required as this model can be positioned lower on the wall.

Up Front Savings: A typical flushing urinal is 300% more expensive than the Uridan urinal because Uridan waterless urinals do not require water, flush mechanisms, sensors and solenoid valves, only a waste pipe.

Simple Installation: Simply hang the urinal on the mounting brackets (supplied) and connect to the sewer pipe, prime the trap with 3 litres of water and add uriLOCK. The urinal is now ready for use.

Quick and Easy Servicing: No plastic inserts, deodorising blocks, mats or 3rd party devices are required. Simply pour in the uriLOCK blocking fluid and the urinal is ready for use. It's that simple.

Water savings: Uridan waterless urinals save an estimated 50-60,000 litres of water per urinal per year. As an example, a building with 20 single bowl Uridan urinals will save 1.2mL – equivalent to *\$3,600 - \$6,000 per annum! (*Sydney Water pricing)

Sustainable Buildings: Reach water conservation targets with ease with uridan waterless urinals

Product Specifications:

Models:

- KHC Ceramic
- GHC Glass reinforced plastic
