

Uridan Pylon By designer Troels Bøgely

The Pylon is Uridan's most 'funky' design created specifically for clubs, pubs, restaurants and hotels.

Danish Design:

The simple sophisticated design is available in 2 heights (the Pylon Maxi and Pylon Midi).

The Pylon urinal is extremely versatile as this unit can be installed over existing toilet wastes providing installation cost-benefits for property owners.

Up Front Savings: A typical flushing urinal is 300% more expensive than the Uridan urinal because Uridan waterless urinals do not require water, flush mechanisms, sensors and solenoid valves, only a waste pipe.

Simple Installation: Simply hang the urinal on the mounting brackets (supplied) and connect to the sewer pipe, prime the trap with 3 litres of water and add uriLOCK. The urinal is now ready for use.

Quick and Easy Servicing: No plastic inserts, deodorising blocks, mats or 3rd party devices are required. Simply pour in the uriLOCK blocking fluid and the urinal is ready for use. It's that simple.

Water savings: Uridan waterless urinals save an estimated 50-60,000 litres of water per urinal per year. As an example, a building with 20 single bowl Uridan urinals will save 1.2mL – equivalent to *\$3,600 - \$6,000 per annum! (*Sydney Water pricing)

Sustainable Buildings: Reach water conservation targets with ease with uridan waterless urinals

Product Specifications:

Models:

- GVT Glass reinforced plastic, Tower – height 940mm
- GVMDT Glass reinforced plastic, Tower Midi – height 800mm

Installation:

- Floor waste fitting

Colours:

- Pylon: White, Tele Grey, Jet black

White

Tele Grey
