

Uridan delivering performance and water savings

SUMS delivering simple data insights

uridan SUMS – SMART Building Integration

Introducing Uridan SUMS – the next generation of water smart amenities. The combined uridan SUMS solution offers an intelligent new way to save water and reduce costs in commercial amenities, while taking performance and user experience to the next level.

With our combined solution of uridan waterless urinals and the SUMS portal, you will be able to monitor your water consumption data from any smart device. uridan SUMS is easily installed allowing you to monitor traffic to amenities through water and energy usage patterns. You can elect to install any water-saving device, from waterless urinals and dual-flush toilets to water-efficient taps and showerheads.

Accurate and real-time water usage data will help you better understand your amenities, simplifying maintenance and cleaning regimes, boosting performance and reducing costs.

What's more - Uridan SUMS will highlight exactly how much water is being used in amenities, allowing your teams to aim for (and achieve) best practice benchmarks and improved sustainability ratings.

Performance and sustainability in focus

Performance and Sustainability have become key factors in the design of commercial office spaces and shopping centres. The uridan SUMS solution delivers:

- water usage insights for Smart Building Integration
- improved maintenance regimes
- tailored uridan waterless urinal solutions for a stylish addition to amenities
- your choice of water-efficient fixtures and fittings for simple resource savings
- an improved user experience for staff and customers

Uridan SUMS – for performance, sustainability and savings
